Facilitator Notes For SG

- What is one way the health care team can collaborate to improve the care of this patient?
- What other providers can/should be involved in the care of this patient?
- What is one skill specific to your role on the health care team that can be implemented that is not already in use for this patient?
- What actions do you think are contributing to her healing?
- What might be enhancing her pain and disease process?
- What role can a nurse play in helping this patient return to her ADLs?
- How can the health care provider help this patient?
- Is a history of smoking, with a quit date of 1979, relevant to S.G.’s medical history? History of caffeine use relevant?
- What could S.G.’s primary care doctor have done differently when SG first approached him/her with a complaint of painful and swollen knees?
- Where would you begin as a health care provider for this patient?
- Has she tried any other therapy?
- Does she need financial assistance?
- How can a psychiatric evaluation help this patient?
- How can her family help S.G. deal with his conditions?
- What additional assessments would be relevant for this patient?
- What resources besides medication exist for SG? Rheumatoid Arthritis Support Groups?
- What pain techniques have you seen or used in a clinical setting that have been effective?
- How does someone in your profession know when they’ve made a mistake?
- Do you think it is important for healthcare professionals to give feedback to other healthcare professionals when they think that they have missed an important aspect of a patient’s signs/symptoms?
- Have you seen any example where there was a process in place for inter- or intra-professional feedback to help a practitioner learn from his or her errors in diagnosis or treatment?
- What judgments or assumptions are you aware of about your own profession? About other health professions?
- How would someone from your profession help a person who has difficulty sleeping?
- Will you come in contact with patients like this in your practice?
- What are some attitudes that medical professionals may have of this patient?
- How does a specific treatment affect the work of other providers?
- How could you support the efforts/treatments of providers in other fields?
- How could you support the patients’ exploration of other therapeutic options?

Additional Resources

Certified Registered Nurse Anesthetist: Preoperatively renal labs like a creatinine and BUN should be checked. Medical Student: Ask “review of systems” questions related to her general health, musculoskeletal, psychological, cardiovascular, and pulmonary systems. Full PE including ROM and neurological testing in extremities, spine, and neck.
