

A Teenager's Guide to Healthy Living

How to stop obesity in its tracks

Defining Obesity

- An excess amount of fat that is calculated based on your height and weight also known as the **Body Mass Index (BMI)**.¹

Did you know?

- 18.4% of adolescents aged 12-19 are obese across the United States.²
- Obesity rates for children, adolescents and adults have increased in the last 3 decades.³
- Overweight teens are more likely to become overweight adults.⁴

The cause?

- Food and beverages that are high in salt, fat, and sugar.³

- Not enough physical activity.³

What can you do?

Eat well!

1. Choose healthy snacks that will keep you full throughout the day.³
2. Control your portion sizes.
3. Replace sodas and other sugary juices with water.³
4. Include a variety of fruits and vegetables, whole grains, and lean protein in your diet daily.³
5. Avoid processed, high fat and sugary foods such as hamburgers, hot dogs, potato chips, pizza, donuts etc.³

Get moving!

Aim for 30 to 60 minutes of exercise a day.³ Make it a family activity!
